**DATA AND APPLIED SCIENTIST,
MICROSOFT**

INTRO TO DATA SCIENCE

WHO IS A DATA SCIENTIST?

DATA SCIENTIST

Identify Objective

Collect Data

Clean Data

Analyze & Model

Interpret results

Communicate Findings

- Data Collection:**

- The process of gathering raw data from various sources, such as databases, web scraping, IoT devices, or surveys.

- Data Cleaning:**

- Real-world data is messy. Cleaning involves handling missing values, duplicates, and inconsistencies to ensure quality and reliability.

- Exploratory Data Analysis (EDA):**

- Understanding data patterns, distributions, and relationships using visualization tools like matplotlib, seaborn, or Tableau.

- Feature Engineering:**

- Transforming raw data into meaningful features to improve the performance of machine learning models.

- Model Building:**

- Using algorithms (like regression, classification, or clustering) to make predictions or segment data.

- Model Evaluation:**

- Assessing model accuracy using metrics such as precision, recall, F1-score, or RMSE.

- Deployment:**

- Integrating models into production environments to generate real-time insights or automate decisions.

KEY COMPONENTS OF A DATA SCIENTIST

- Advanced Analysis
- Predictive Modelling
- Automation
- Efficiency
- Personalization
- Real-time Insights
- Improved Accuracy

WHY IS MACHINE LEARNING RELEVANT TO DATA SCIENTISTS?

Predictive Policing

Online Fraud Detection

APPLICATIONS

QUESTIONS?

THANK YOU !
